SOFTWARE REQUIREMENTS SPECIFICATION

RISE JOE ECOMMERCE AGENCY
Professional Website & Service Platform

Version: 1.3 **Date:** 26 October 2026 **Prepared for:** Website Development Team

1. Project Objective

Develop a premium, responsive, conversion-oriented agency website that serves three core audiences—Students, Clients and Investors—and enables visitors to discover and request specialized ecommerce services. The site should communicate credibility to entrepreneurs and established businesses, clearly explain offerings and route each enquiry to the appropriate agency team.

2. Site Architecture

- Top-level pages: Home, About Us, Students, Clients, Investors, Services, Contact Us.
- Services hub: individual pages for each service, searchable/filterable categories, relevant FAQs, and clear 'Request This Service' calls to action.
- About page: company overview, professional team presentation, and three Lahore offices (two in Pak Arab and one in Johar Town).
- Use a CMS to manage all pages, service offerings, products, enquiry questions, country options and calls to action without coding.

3. Student Program

- **Path A — Business Launch:** Students with access to international business connections and/or investment can request assistance planning, establishing and operating their ecommerce venture.
- **Path B — Practical Work Opportunities:** Students without investment or overseas connections can apply to learn through supervised internal projects and potential agency work, subject to evaluation and availability.
- Student enquiry form: full name, contact, country, current skill level, desired pathway, relevant experience and message.
- Do not display student fee details or internal financial arrangements on the website.

4. Client Partnership Models

- **Client-Funded:** A client supplies a legitimately owned/authorized ecommerce account or requests compliant setup, provides operating capital and agrees on management and profit-sharing terms with the agency.
- **Agency-Funded:** An eligible client provides legitimate business/account participation but does not provide operating investment; the agency may finance agreed operations, with the commercial share negotiated individually.

- Serve eligible Pakistan, UK, USA, Australia and Canada clients, subject to jurisdiction and marketplace policies. Never represent account rental, identity lending or verification circumvention as a service.
- Client enquiry: target marketplace, jurisdiction, existing account status, investment availability, business objectives and contact details.

5. Investor Partnership Models

- **Project Funding:** Present investors with approved client-account project opportunities, proposed allocation of capital, operating approach, expected timeline, risks and reporting arrangements.
- **Inventory/Product Funding:** Hunt and evaluate potential products, present unit economics, sourcing options and fulfilment plans for UK, USA, Australia and Canada markets.
- Fast sourcing from wholesalers/distributors or air routes may take approximately 3–10 days, with illustrative ROI targets of 30–35%. Longer overseas/sea sourcing may take approximately 25–30 days, with illustrative ROI targets of 40–50%. These are planning examples, not guaranteed outcomes.
- Investor workflow: enquiry → discovery call → project/product proposal → risk and terms review → investor approval → documented funding → progress updates.

6. Services — Required Dedicated Pages

6.1 Website Design & Development

Custom business websites, ecommerce stores, landing pages, redesigns and maintenance. Collect business type, desired platform, reference sites, features, budget range and timeline.

6.2 VPS Services

VPS solutions for supported country locations, including UK, USA, Australia, Canada and Pakistan where available. Display selectable region, plan, specification, duration and availability; allow service order or quote request. Route details to the VPS team.

6.3 Warehousing & Fulfilment

Warehouse storage, inventory management, pick/pack and shipping support. Collect warehouse market, product type, estimated stock volume and fulfilment requirements.

6.4 Product Hunting & Product Sourcing

A complete research-to-procurement service for products intended for ANY supported ecommerce platform (e.g., Amazon, eBay, Etsy, Walmart, Shopify, TikTok Shop and other applicable marketplaces). Customers can request product hunting only, sourcing only for a product they already selected, or both services together. Product hunting covers market research, demand, competition, selling-price analysis and preliminary margin/ROI estimates. Sourcing covers distributor, wholesaler, manufacturer and China/UK/USA supplier options, quotes, MOQ, sample/quality requirements, shipping methods and landed-cost estimates. Provide separate buttons: 'Request Product Hunting', 'Source My Product', and 'Hunt & Source a Product'.

6.5 Stock Products & Wholesale Supply

Show available or requestable stock products and wholesale inventory for eligible markets. Support requests for ready stock and custom sourcing of the customer's own selected product from UK/USA distributors, wholesalers, manufacturers or other suitable suppliers. Capture product link/image, category, target country, quantity, budget, preferred delivery date and any brand restrictions.

6.6 Free Ecommerce Account Consultation & Checkup

Offer a FREE initial consultation and diagnostic checkup across supported ecommerce platforms—not only Amazon. Visitors can ask why an account is not generating sales, request review of listings, pricing, visibility, account health, policy notices, conversion, traffic, fulfilment, defects or growth strategy. Present this as an initial assessment with practical recommendations, not a guarantee of sales. Include 'Get Free Account Checkup' and 'Ask an Account Expert' calls to action.

6.7 LTD Company Registration Assistance

UK limited company registration support and related onboarding guidance. Collect company registration requirements and jurisdiction; approvals and legal/tax advice remain with appropriate authorities or qualified professionals.

6.8 LLC Company Registration Assistance

US LLC formation support, state selection enquiry, documentation guidance and follow-up. Make clear that filing outcomes and tax/legal treatment depend on applicable rules.

6.9 Distributor & Wholesale Account Creation

Assistance with genuine distributor/wholesaler trade account applications. Collect business details, country, product category, company documents and intended purchasing volume. Account acceptance remains the distributor's decision.

6.10 All Ecommerce Marketplace Account Setup

Replace the narrow 'Amazon Account Setup' service with broad 'Ecommerce Marketplace Account Setup'. Offer guided seller/store account creation and onboarding for eligible marketplaces such as Amazon, eBay, Etsy, Walmart Marketplace, Shopify, TikTok Shop, Temu and other supported platforms. The visitor chooses platform and country, specifies new or existing business, describes verification/setup difficulties and requests assistance. Follow each platform's eligibility, identity, business and ownership rules; never guarantee account approval.

7. Service Enquiry UX & Required Forms

- Every service card must be clickable and open a dedicated page with: service overview, benefits, how it works, supported platforms/regions, FAQs and an enquiry form relevant to that specific service.
- Shared form fields: name, email, phone/WhatsApp (optional), country, selected service, enquiry details, consent checkbox. Add conditional fields for the selected service.
- Product Hunting form: target platform, marketplace/country, category or niche, budget, desired price range, target ROI if any, restrictions, whether product ideas already exist and research requirements.
- Product Sourcing form: existing product name/link/photos, quantity, target cost, desired supplier region, destination market, logistics preference and timeline.
- Free Account Checkup form: platform, market, account age/status, main issue (no sales/low sales/account health/listing/ads/other), approximate performance and a short description. Do not request passwords, OTPs or

sensitive credentials.

- Account Setup form: platform(s), jurisdiction, individual/business status, current registration stage, support needed and best contact method.
- Submission flow: choose service → answer relevant questions → consent and submit → on-screen confirmation and email acknowledgement → agency staff notification → assigned follow-up.

8. Admin & Content Management

- Manage service pages, new service categories, product listings, VPS plans, supported countries, FAQ, team contacts, testimonials and forms.
- View and filter leads by service, platform, country, submission date and status (new, contacted, qualified, in progress, closed).
- Route leads to responsible staff; send notifications and maintain a basic enquiry history. Allow export with appropriate permissions.

9. Design, Performance, Security & SEO

- Professional corporate aesthetic with strong typography, trustworthy messaging, responsive cards, clear CTAs and polished mobile navigation.
- Fast loading, optimized assets, semantic headings, SEO metadata, clean URLs, sitemap and analytics conversion events.
- HTTPS, role-based CMS access, backups, anti-spam, form validation, secure uploads where needed, privacy notice and data minimization.
- Do not promise investment returns, seller-account approvals, distributor approval, specific sales outcomes or guaranteed sourcing lead times.

10. Acceptance Criteria

- All three audience pathways and all ten services appear on the site with correct descriptions and working dedicated enquiry flows.
- 'All Ecommerce Marketplace Account Setup' replaces Amazon-only setup everywhere, including cards, navigation, forms and CTAs.
- 'Free Ecommerce Account Consultation & Checkup' clearly applies across marketplaces and allows visitors to explain no-sales and other account issues.
- Product hunting and product sourcing can be requested separately or together for any supported marketplace; custom stock product requests are supported.
- Admin can add future services and change conditional enquiry questions without rebuilding pages.
- All form submissions are validated, confirmed, captured for staff follow-up and tested on desktop and mobile.

11. Items to Confirm Before Launch

Final brand assets, hosting/domain, supported platform list, contact channels, VPS packages/prices, warehouse coverage, product inventory data, payment approach (quote-only vs checkout), legal pages and final operational terms must be confirmed with the agency.

12. Office Addresses & Contact Page

Main Office:

Plaza No. 26B, Pak Arab Housing Society, Lahore, Pakistan.

Office Locations:

3 offices in Lahore: 2 in Pak Arab Housing Society and 1 in Johar Town.

Developer Requirement:

Display the main office address on the Contact Us page and About Us page.

Location Information:

Show office locations in the contact section; add a map or directions link

for the main office after confirming the map pin and exact street location.

Contact Details:

Allow the administrator to edit addresses, phone numbers, office hours,

and map links from the website CMS without developer assistance.

Important Note:

Only the main office full address has been provided. Do not invent

street addresses for the other two office locations.
